JI., Raynor R.L., Kuo J.F.;

"Identification of sites phosphorylated in bovine cardiac troponin I and troponin T by protein kinase C and comparative substrate activity of synthetic peptides containing the phosphorylation sites.";

-I. Biol. Chem. 264:20778-20785(1989).

-I. FUNCTION: TROPONIN T IS THE TROPOMYOSIN-BINDING SUBBUIT OF TROPONIN, THE THIN FILAMENT REGULATORY COMPLEX WHICH CONFERS CALCIUM-SENSITIVITY TO STRIATED MUSCLE ACTOMYOSIN ATPASE ACTIVITY.

-I. ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.

-I. SIMILARITY: BELONGS TO THE TROPONIN T FAMILY.

PIR; A28008; A28008.

1. FUNCTION: TROPONIN T IS THE TROPOMYOSIN-BINDING SUBUNIT OF TROPONIN, THE THIN FILAMENT REGULATORY COMPLEX WHICH CONFERS CALCIUM-SENSITIVITY TO STRIATED MUSCLE ACTOMYOSIN ATPASE ACTIVI-1. DEVELOPMENTAL STAGE: EXPRESSED FROM MIDGESTATION TO ADULT LIFE.

1. SIMILARITY: BELONGS TO THE TROPONIN T FAMILY.

-: TISSUE SPECIFICITY: Heart. The fetal heart shows a greater expression in the atrium than in the ventricle, while the adult heart shows a greater expression in the ventricle than in the atrium. Isoform 6 predominates in normal adult heart. Isoforms 1, 7 and 8 are expressed in fetal heart. Isoform 7 is also expressed in falling adult heart.

-! DISEASE: DEFECTS IN TNNT2 ARE ONE OF THE CAUSES OF FAMILIAL HYPERTROPHIC CARDIOMYOPATHY (FHC) WHICH IS AN AUTOSOMAL DOMINANT DISORDER CHARACTERIZED BY INCREASED MYOCARDIAL MASS WITH MYOCYTE AND MYOFIBRILLAR DISARRAY. THIS FORM OF FHC IS KNOWN AS CMH2.

IT IS A DISEASE OF THE SARCOMERE.

-!- SIMILARITY: BELONGS TO THE TROPONIN T FAMILY.

RT "Complete nucleotide sequence and structural organization of rat recardiac troponin T gene. A single gene generates embryonic and adult reduction via developmentally regulated alternative splicing.";

RT 150forms via developmentally regulated alternative splicing.";

RL J. Mol. Biol. 227:1269-1276(1992).

CC 1FONOTION: TROPONIN T IS THE TROPOMYOSIN-BINDING SUBUNIT OF TROPONIN, THE THIN FILAMENT REGULATORY COMPLEX WHICH CONFERS CC CALCIUM-SENSITIVITY TO STRIATED MUSCLE ACTOMYOSIN ATPASE ACTIVITY.

CC 1- ALTERNATIVE PRODUCTS: 2 isoforms; 1/smbryonic form (shown here)

CC and 2/Adult form; are produced by alternative splicing.

CC -1- SIMILARITY: BELONGS TO THE TROPONIN T FAMILY.

CC -1- SIMILARITY: BELONGS TO THE TROPONIN T FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

1- FUNCTION: TROPONIN T IS THE TROPOMYOSIN-BINDING SUBUNIT OF
TROPONIN, THE THIN FILAMENT REGULATORY COMPLEX WHICH CONFERS
CALCIUM-SENSITIVITY TO STRIATED MUSCLE ACTOMYOSIN ATPASE ACTIVITY.

1- ALTERNATIVE PRODUCTS: 2 ISOFORMS, EMBRYONIC/EA (SHOWN HERE) AND
A3B; ARE PRODUCED BY ALTERNATIVE SPLICING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EMBL;

7. Hol. Biol. 213:399-405(1990).

8. FUNCTION: Binds to actin filaments in muscle and nonmuscle cells. Plays a central role, in association with the troponin complex, in the calcium dependent regulation of vortebrate striated muscle contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nonmuscle cells is implicated in stabilizing cytoskeleton actin filaments.

9. SUBUNIT: DIMER OF AN ALPHA AND A BETA CHAIN.

10. DOMAIN: THE MOLECULE IS IN A COILED COIL STRUCTURE. THE SEQUENCE EXHIBITS A PROMINENT SEVEN-RESIDUES PERIODICITY.

11. SIMILARITY: BELONGS TO THE TROPOMYOSIN FAMILY.
                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.                                                                                                                                                                                                                 The CDNA encoding the present sequence, which contains human soluble CD23 isoform B, can be used for the large scale recombinant production of soluble CD23.

The specification states that the nucleotide sequences contained in figures 4a-b, 5a-b, 12a-12b and 13a-b are claimed, however this numbering scheme does not relate to the scheme used in the relevant sections of the specification.

The DNA encoding the protein is obtd. from, eg human B cells, human malignant B or T cells, human monocytes or human eosinophilic cells. RRMI 8866 cells may also be cultured to produce the mRNA. The IgE binding factor and Fc epsilon receptor binds IgE and can be used to enhance the produc. They can be used to treat allergies by eliminating excess blood IgE, and can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New IgE binding factor protein - obtd. by cu class specific Fc receptor on their surface.

```

```
The peptide is related to the IgE receptors on human B-cells and, if without the membrane anchoring sequence, to the IgE-BFs of Sarfati et al. Immunology 53, 197, 207, 783 (1984).

Amino acids between 1-133 starting from the N-terminal may be deleted. This is the membrane-anchoring sequence binding the polypeptide to the Cytoplasmic membrane of the B-cells.

Alternatively amino acids between 110-130 or 250-321 may also be deleted. The peptide has IgE binding activity and is useful tor treating allergic conditions, e.g. as caused by antigens such as pollens,
                                                            06-AUG-1987;
                                                                                                                                                                                                                                                                                          Sequence encoded by a gene for the water-soluble part of the human low affinity Fc-epsilon-receptor with the amino acids 150 to 321, comprising the EcoRI insert from pFc-epsilon-R-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 36; 48pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The inventors claim a human low affinity Fc-epsilon-receptor (FCR)

With an N-terminal cytoplasmic domain, a C-terminal extracellular

domain and a mol.wt. of about 46kd. Also claimed are recombinant DNA

contg. the genetic information for the FCR, vectors contg. the DNA,

host organisms transformed with the vectors, oligonucleotides coding

for partial amino acid sequences from FCR, and processes for

preparing FCR. Preferred embodiments of the present invention are

preparing FCR. Preferred embodiments of the present invention are

part of the cDNA SQ coding for the ANS 1 to 148 of the Fc-epsilon-R

is replaced by a eucaryotic cDNA signal SQ e.g. an interlewin cDNA

signal SQ e.g.by the BSF-2 signal SQ (see pBSF-2-L8-AAN81517/P81176).

A suitable yeast expression vector is a plasmid contg. the yeast

ADHI-promoter, a gene coding for the yeast mating factor alpha

leader peptide (MF alpha leader SQ) a multicloning site and the

yeast ADHI-terminator (see AAN81514/P81173). See also EP-258492.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Soluble recombinant Fc-epsilon receptor - used for treatment or prophylaxis of local and allergic reactions induced by IgE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Whole human lymphocyte receptor for immunoglobulin (see corres AAN90344). Used to produce highly bloactive water-soluble FCR. Water-soluble FCR binds 1gE, so it is useful for treating hypersensitivity, esp. asthma. Amino acid residue 150 is a possible site for trypsin-like proteases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-PSDB; AAN90344.

                                                                                                                                                                                             AAW13142 standard;
                                                                                                                                                                                                                                                                                                                                    The sequence is of IgE-binding factor, secreted from the plasmid pSVG-BF. The plasmid pSVG-BF is a derivative of plasmid pSVG-ER which has the sequence coding amino acids 1-147 replaced with a coding region (AAQS5400) allowing secretion of the factor.
                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant DNA molecule - comprises enhancer and promoter unit linked to transcriptive DNA segment and DNA segment comprising promoter unit linked to DNA sub-segment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Key

                                                                                                                                                                                                                                                                                                                                                         The cDNA is obtained by reverse transcription of mRNA isolated from cells expressing IgE-binding activity, esp. human B-cells RPMI 8866. The peptide is related to the IgE receptors on human B-cells and, if without the membrane anchoring sequence, to the IgE-BFs of Sarfati et al. Immunology 53, 197, 207, 783 (1984). Amino acids between 1-133 starting from the N-terminal may be deleted. This is the membrane-anchoring sequence binding the polypeptide to the cytoplasmic membrane of the B-cells.

Alternatively amino acids between 110-130 or 250-321 may also be deleted. The peptide has IgE binding activity and is useful tor treating allergic conditions, e.g. as caused by antigens such as pollens, cat danders and house dust mites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  22-JUL-1986;
07-NOV-1986;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EP254249-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human IgE binding factor; IgE-BFs; allergic diseases; pCL-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human IgE binding factor related polypeptide from pCL-1.

troponin T, fast skeletal muscle splice form alpha - rabbit (frac C; Species: Oryctolagus cuniculus (domestic rabbit) C; Date: 30-Apr-1993 #sequence_revision 17-May-1996 #text_change 1 C; Accession: B44459 R; Pan, B.S.; Potter, J.D.
J. Biol. Chem. 267, 23052-23056, 1992
A; Title: Two genetically expressed troponin T fragments represent A; Reference number: A44459; MUID:93054628; PMID:1429653 A; Accession: B44459
A; Status: nucleic acid sequence not shown; not compared with cond A; Molecule type: mRNA A; Residues; 1-234 <PAN>
A; Residues; 1-234 <PAN>
A; Experimental source: neonatal skeletal muscle clone pT7 A; Note: sequence extracted from NCBI backbone (NCBIP:118207) C; Comment: The two carboxyl-terminal isoforms of troponin T are cexpression of troponin T.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Residues: 1-175 < FAR>
